

In this bachelor thesis author focuses on free time activities of young deaf people in age of 15-20 years (period of late adolescence). For purpose of this work, deaf people are defined as those who prefer Czech sign language over other forms of communication. The contents of this work is as follows: the first chapter defines age of target group. Next chapter deals with hearing impairment classification. Following chapter discusses means of communication of deaf people and the importance of free time activities for yong people and for young deaf people in particular. In the practical part author investigates opinions of young deaf adolescents who attend special schools for hearing impaired students in Prague and Hradec Králové. She also studies contemporary supply and demand of free time activities in involved institutions and particular interests of hard of hearing adolescents.
