

The Bachelor work is aimed at a quality of nursing among the clients after the cerebral apoplexy. The theoretical part explains the conceptions: cerebral apoplexy, quality, standard of nursing, nursing care and physiotherapy. The work emphasises the changes at the client during the illness. The empirical part of the Bachelor work calls over the standard of nursing in a view of the clients from internal department in Lužická hospital. The final dates should help the physicians to improve the quality of nursing care among the clients suffers from the illness, eventually to regulate the standard of nursing.
