

Bachelor thesis focuses on the education of patients with oral anticoagulation therapy with Warfarin.

In its theoretical part discusses the two main objectives. The aim of the first part of this work is to provide information on education, guidelines and terms of education, but also the specifics of education of patients treated with Warfarin in cardiology clinic. The second goal is to provide comprehensive information on anti-coagulant drugs - Warfarin.

Focus of this work consists of empirical research based on quantitative survey with standardized questionnaire methods, mapping knowledge and information of patients treated with anticoagulant drug Warfarin. The sample of respondents consists of 50 81 patients followed up in cardiology clinic in Velke Mezirici. In the period from November 2009 to February 2010. The outcome of this work is based on observed results from the questionnaire design educational theory hours for patients initiating therapy with Warfarin and a proposal for an information brochure.
