Year of vindication: 2010

Key words: quality of life, social reliance, Spinal muscle atrophy, human needs, communication, family

Bachelor's work deals with the trouble of stabilization of disabled individual and family and subsequently with ability of full back join to society and family.

Theoretical part explains single conceptions matched to the main thema. Determines the trouble of acceptance of disability by individual and family. Describes theory of life quality. Informs about disease and forms of spinal muscle atrophy and touch to importance of good communication in family.

In practise part can be find analised facts, which way family and disabled individual have been matched to the handicap and which way is accapted by society where is living. As part of the work there are enclosed exactly rewritten dialogues with separate members of family.

In the final of the work follow on, how complicated is this situation neither for disabled individual, for family, as the same as for whole society. How big and unfungible role has family in the case of solution of these troubles. And finally, such a strong individual arise from the solutions of similiar kind of life situation.
