

Cannabis sativa - the plant which is discussed in all social communities. Some of them hold a brief for it and the others curse it. This is the main reason why I wrote my bachelor work Cannabis sativa - the Plant Used and Abused particularly about this plant. The work informs the readers about the taxonomy and anatomical structure of this plant, we mentioned the history of growing the hemp, and the use and abuse of the plant is summed up according to various authors.

Finally, a research at a secondary school of the knowledge of students and their teachers about Cannabis sativa was carried out. The results showed common minor knowledge of the plant itself, and the students, as well as their teachers, proved wider information of the drug form of this plant. The older students are better informed than the younger ones, in the case of their teachers this goes conversely and boys have better information than girls.

This work should be a useful summary of both positive and negative aspects of Cannabis sativa for all who want to know something more about this plant.
