

Excessive noise occupies a number of factors that threaten our environment increasingly important place. Few would doubt the fact that the noise for adverse human factor, whose influence is growing. However, this is again one itself, which due to their usual daily activities and needs, is "all to hear." In the work environment, chronic exposure to noise leading to irreversible auditory disorder. Disturbance and annoyance in the environment is still mimopracovním frequent complaints of subjective quality of the environment and can also constitute the initial impetus of development of neurotic and psychosomatic disorders.

Although they are in place relatively strict limits to protect exposed persons, the problem often can not be addressed in practice easily and quickly. The fault is a complex relationship involving subjective interest in exposed persons often in contrast the interests of economic, social or political. The problem in specific cases, it may certainly be the interpretation of laws.

The aim of this work is to characterize the various risks associated with exposure noise and provide an overview of how to protect against noise in work and mimopracovním environment.
