

The aim of the M.Sc thesis is evaluation of the ten small-scale especially reserved territories (“**mZCHU**”) in the southeastern part of Prague following the methodic of the evaluation of small-scale especially reserved territories (Svátek&Buček; 2005). These territories are individually described in the first part of this diploma thesis, then I shortly give an account of the methodic I used and in the main part of this work the analyzed territories are described and ranked .By analyzing the acquired information I discovered that the overall condition of these territories is average (70%). 10% of territories are excellent, 50% are good, 30% average, 10% bad. None of these territories was rated as very bad. Using the same methodic I evaluated the intensity of management for these territories; with these outcomes: 10% excellent, 60% good, 30% average. None of these territories was very bad. In the conclusion of this work is analyzed the comparison of acquired information with the outcomes of the evaluation of **mZCHU** areas in southwestern part of Prague (Hamplová; 2008), in the village of Štěpánov (Bubeníková; 2008) and with territories in competence of CHKO Pálava (Rejtek; 2008). The outcomes of comparison of these territories shows that areas in southeast part of Prague and chosen territories of CHKO Pálava are average whereas localities in southwestern part of Prague and chosen areas in the village of Štěpánov are evaluated as „good“. The comparison of outcomes of management about these territories showed that all regions I mentioned are evaluated as „good“.
