

This diploma thesis discusses the analysis of space polarisation in the Trutnov region and consequently it tries to suggest possibilities of development for peripheral areas. The first part is devoted to the theoretical concepts of the spatial polarization and the methodological analysis of this thesis. In the second part, the selected theoretical and methodological concepts are applied to area of the Trutnov region. The analysis of space polarisation in the Trutnov region was realised on the basis of using quantitative methods. Development of the peripheral areas between two time periods (around a year 1991 and present) was evaluated too. The final part of this thesis is aimed to the analysis of the peripheral areas in the Trutnov region and proposition of their possible development strategy.
