HŘEBECKÁ, L. *Vitamins and their representation in medicinal products*. Hradec Králové: Charles University, Faculty of Pharmacy, 2011. 55 p. Supervisor: Doc. RNDr. Jaroslav Dušek, CSc.

In this diploma thesis I deal with the content of individual vitamins in mass produced pharmaceuticals. The general introduction is followed by the overview of the most frequent vitamins in these products and their characteristic. Furthermore, there are tables with the recommended intake of nutrients for individual groups of people. There are also tables with the level of vitamins in selected products. The thesis is finished with an overall summary where I focus on a comparison of the contents of vitamins with the recommended intake of nutrients. Finally, there is a division of products into two categories- the save ones and, on the contrary, the ones which should rather be omitted.
