

The diploma thesis, entitled *Road Safety Education in Primary Schools*, is focused on content of current children's Road Safety Education in schools, how to improve the quality of it and also how to enlarge it thanks to available materials. This thesis consists of the theoretical and the practical part. The former characterises children's Road Safety Education, its' principles and goals and it defines a child as a participant in a traffic. It summarizes content of Road Safety Education in primary schools and also one chapter is devoted to children's traffic play-grounds as an obligatory component of educational content. Therewithal, it is concerned with traffic accidents and with preventative programs. The practical part is dedicated to interviews with specialists and with children. It describes one day of the preventive program BESIP Team. It offers challenging questions which can be used in classes and it contains a set of ready to use materials with a methodology for teachers.
