Abstract

Thesis is based on the views of authors of sociology of knowledge (Berger, Luckman, Bourdieu) and authors of discourse analysis (Foucault, Fairclough). The central assumption is that knowledge is socially constructed and that this construction has its strong ideological and hierarchic aspects. Author is analyzing books and texts of Vaclav Klaus using the critical discourse analysis. Author is convinced that Vaclav Klaus has a substantive influence on public opinion in Czech Republic. Also author is convinced the struggle in the discussion over environmental topics is based in different basic assumptions of discussion participant. Thus author decided to analyse the Vaclav Klaus’s basic assumptions for the notions of nature and environment.
