

ABSTRACT:

This master thesis is the groundwork for realization of an educational nature trail in the Natural monument Milíčovský Forest and Ponds. The theoretical part deals with the nature protection in the Czech Republic, as a part of the European Union. Moreover, the characteristics of the given area are elaborated in detail with a focus on geology, flora and fauna in this part. In the practical part, I utilised the basic information as a basis for individual panels of the educational nature trail,. The graphical layout of individual panels is attached as an appendix of the thesis.

The purpose of this study is to contribute to the protection of natureal values in Natural Natural monument Milíčovský Forest and Ponds. The information provided in this study should have wider impact in the way that they improve general understanding of nature. Furthermore they should extend general knowledge about Milíčovský Forest of its visitors and simultaneously they should reinforce their positive attitude toward nature as a whole.
