

Abstract

Title:

Students' tendency to sensation seeking in relation to their personality characteristics.

Objectives:.

The diploma thesis deals with the topic of sensation and his seeking at students of study programme or study field Outdoor Activities. A survey of personality characteristics and their influence on tendency to gaining sensations, was the main objective of this work. A sensation is still current topic of nowadays' society. A tendency to its seeking is at some individuals higher and the goal of this thesis is looking for personality characteristics, which could this increasing determine.

Methods:

Used methods for the research were chosen with regard to required characteristics of examined sample (corpus?) and required conclusions.

For detection temper charactertics was chosen test NEO-FFI and for tendency to gain sensations was chosen the test of interests and hobbies.

Results:

When comparing examined samples of students of Outdooractivities among Charles University and University of J. E. Purkyně in Ústí nad Labem were not find any significant differences. Therefore we have worked further as with homogenous file and compared its results with population average. We found out more significant score in subscale in extraversion and negative correlation in subscale of neuroticismu. Moreover, we consider significant higher score in subcale of conscientiousness. In searching of extraordinary Ve vyhledávání mimořádných prožitků se studenti od populačních průměrů liší v celkovém skóre testu vyhledávání mimořádných prožitků (Sensation Seeking Scale V). A to především díky výsledků v subškále TAS – vyhledávání napětí a dobrodružství a subškále ES – vyhledávání zkušeností.

Regarding to higher tendency to look up tension and adventure jsme jako nejvýznamnější vliv osobnostních charakteristik určili extraverzi. Ta signifikantně ovlivňuje tendenci vyhledávat napětí a dobrodružství.
