

Téma diplomové práce	Derivatives of Rhodanine as Potential Antifungal Drugs
Jméno studenta, studentky	Mariana El-Zein
Jméno vedoucího diplomové práce	Assoc. Prof. RNDr. Veronika Opletalová, Ph. D.

I. Posudek vedoucího diplomové práce

Mariana El-Zein started to work on her diploma thesis in the winter term of the 4th year of her studies. Theoretically, she had enough time to perform a lot of experiments. However, her work was often interrupted for long periods due to other duties of study and personal reasons. As a result, it was not possible to study all experimental details and successfully complete all experiments. Only one product was successfully prepared and identified. Regarding theoretical part of work, Mariana had no problem with writing about mycoses and possibilities of their treatment, but was less interested in chemical literature concerning Mannich bases.

The results achieved in her thesis form a starting point for future studies of Mannich bases derived from rhodanines

I recommend the thesis to discussion and evaluation.

Navrhovaná klasifikace **very good**
