

The main goal of this diploma thesis is creating a group stimulatory activating scheme according to the principles of the PACE therapeutic schemes for people who are afflicted with aphasia.

The theoretical part is focused especially on the field of logopaedics therapy, on therapy of aphasia and on a characteristic of the PACE therapeutic scheme.

The empirical part is describing in detail the stimulatory activating scheme for people afflicted with aphasia. This scheme is intent on development of communication. Then the data obtained during realization of the scheme in facilities for people are analysed. The diploma thesis output will be an easy usable stimulatory activating scheme for developing communication of people with aphasia.

Keywords: therapy in logopaedics, PACE therapeutic scheme, people with aphasia, group stimulatory activating scheme.
