

Main goal of my bachelor thesis is to investigate life satisfaction in the Czech Republic and find explanatory variables influencing it, with an emphasis on economic indicators. It strives to compare Czech Republic with other states of the European Union, especially in relationship to main macroeconomic indicators. Some of the explanatory variables are discussed in detail in Chapter 4. In Chapter 5 are models on life satisfaction on two datasets. The results of the models are compared according to a type of data and on dependence on used econometric Method. One of the key questions is, how much money „buys“ happiness (resp. In our case life satisfaction).
