

## **ABSTRACT:**

This bachelor's thesis deals with the impacts of global economic crisis on regions in Czech Republic during the years 2008-2009. This work explores disparities caused by economic crisis on the level of regions NUTS III, selected regions NUTS IV and size categories of municipalities and tries to find the causations of this disparities. Analytic base of this work is formed by database contains moreover than 6 000 municipalities with indicators of unemployment, incomes from tax from incomes of physical subjects and created and demise economical subjekt. Each municipality is characterized by basic statistical quantities of indicators like a median, average, standard deviation, variation coefficient, coefficient of correlation and other. It seems that the biggest impacts of economic crisis were in the regions which before the crisis embodied good economic growth. On the contrary the least impacts are shown in the structurally affected and metropolitan regions.

**Klíčová slova:** economic crisis, impacts, change, unemployment, tax from incomes of physical subjects, economical subjects
