

Abstract:

Title: Offer of Outdoor Sport Courses for the 2nd Grade of Chosen Basic Schools in Liberec Region

Aim: The aim of this bachelor's thesis is the description, providing of deeper details and evaluation of recent offer of sport courses in a field of education and outdoor activities taught at basic schools.

Method: All data used in practical part of this bachelor's work were collected using direct questioning method. To collect the information, questionnaires and semi-structured interviews were used. Questionnaires were addressed to eight- and nine-grade students of selected basic schools and were compiled of six closed questions. The semi-structured interview was conducted with managing directors of all chosen basic schools. It was compiled out of twelve mostly opened questions. Collected data were statistically processed and graphically and or orally presented.

Results: Information collected either by using the semi-structured interview with basic schools managing directors or questionnaires addressed to eight and nine grade students assured the original expectations. Difference between both evaluated schools from the sport courses perspective is quite significant, mainly because of its offer. This conclusion has an impact to students satisfaction in both schools.
