

Summary

Title:

Case study of physiotherapy care for patients with Guillain-Barre syndrome.

Objective:

Summary of theoretical knowledge and the processing of study reports of patients diagnosed with Guillain-Barré syndrome.

Abstract:

The thesis consists of two parts. The general section includes anatomical and neurophysiological aspects of GBS characterized by its brief history, treatment, diagnosis, and precipitating factors. A special section is devoted to a case study and rehabilitation plan for the patient. Therapy was directed primarily to improve quality of life. The case study was prepared at the time of practice from 17. 2. to 29. 2. 2011 at the neurology department at the district hospital in Kladno a.s.

Keywords:

Guillain-Barré, syndrome, kazuistics, neurology, peripreral polyradikuloneuritis.
