

## ABSTRACT

Author: Sophia Wilsonová

Work title: case report of physiotherapeutic care about patient with ankylosing spondylitis diagnosis

Key words: ankylosing spondylitis, sacroiliatits, entezopathy

The presented bachelor work is concerned with rehabilitative treatment of a patient with ankylosing spondylitis diagnosis including associated complications of this disease such as articular pains at shoulders and knees as well as entezopathy. The rehabilitative treatment insists foremost upon spinal flexibility maintenance which is herewith a part of the disease progression prophylaxis. In case of disease acute phase, I carry elimination the complications associated with pains caused by fault motional stereotypes in particular. After pains alleviation, I focus on eliminating fault motional habits.
