

## **Abstract**

This bachelor thesis is dealing with the question of what awareness is of the safe and legal usage of the internet. In the theoretical part of this thesis it is dealt with primary and secondary socialization as a process of forming personality of the individual, mutual communication, preventive action in a way of parent's supervision and safe software. Afterwards, there are described choices and risks associative of the internet. There are briefly shown projects, which are helpful for children, parents and educators in a way of getting knowledge about information and communication technologies. It makes effort to prevent and minimalize risks connected with their usage. The second part is build on partly standardize interviews, which were carried out in the 8 families. There are shown the statements of children in an age of 11-13 years to the contrary of parent's statements. It shows, whether the parents and children are aware of risks connected with using the internet. Whether they consider risks as a real thing and they are able to minimalize them. It surveys of where and how much time children spend on the internet, what kind of web pages they visit and if there are clear rules with using the internet within the family. The empirical part is fill in comparison of research "EU Kids Online". This research was hold from 2009-2011 in 25 countries within Europe.
