

Abstract

This bachelor thesis focuses on the question of electricity market liberalization in the European Union, especially on the case of Slovak Republic. The goal of this thesis is process analysis of the electricity market opening in Slovakia, tracking of the implementation process of individual European energy packages, as well as analysis of current state on the electricity market in Slovakia with focus on the key actors and participants on the market. This thesis is enriched by short analysis of positives and negatives of the liberalization process and of the unbundling process of vertically integrated companies.
