

Abstract

Presented thesis is focused on selected botanical gardens in the Czech Republic and their benefits for schools and school teaching. Today, botanical gardens are frequently visited for educational purposes and also for relaxation of people. It is important that teachers know that teaching is not possible to realize only in the school environment. Botanical gardens are an ideal place to make practical biological excursions. According to FEP, it is necessary to teach botany in school. It is important that students know how the plant looks, in which community plant lives and which benefits it has for humans. The expected outcomes mentioned above are important and botanical gardens help with their fulfilling. In my thesis I describe the possibilities that are offered and realized by botanical gardens for school excursions.
