Abstract
This thesis deals with the social networks, especially on social network Facebook. It surveys the basic principles of Facebook and points to the risks arising from the use of social networks and disruptive behavior on the Internet. The work is a treatise on the prevention of cyberbullying and safe behavior on the Internet. In the empirical part, through a questionnaire survey, it examines the risk behavior of students at the second stage of two primary schools in Prague, in relation to life satisfaction. The empirical part also determines life satisfaction associated with the object and method of communication on Facebook.
