**Abstract:** This thesis deals with the importance of rehabilitation nursing care of patients with stroke. Theoretical part approaches the issue of stroke and the importance of early treatment both as pharmacological and nursing care so rehabilitative. A special section introduces the area of rehabilitation nursing, occupational therapy and speech therapy. The empirical part focuses on patients with stroke who were hospitalized in the rehabilitation and aftercare. Quantitative research – questionnaire form was used in four health facilities and confirms or refutes the specific targets of the research.

**Key words:** stroke, rehabilitation nursing, occupational therapy, speech therapy
