

## **Abstract**

The subject of the diploma thesis is a data completion and evaluation of the finds of copper tools and model tools in the 3<sup>rd</sup> Millennium BC, in the Early Dynastic Period, Old Kingdom and First Intermediate Period, in Egypt and Nubia. The first part of the thesis contains subject definition, chronological and chorological definitions and short introduction in the copper metallurgy of Ancient Near East and Egypt in the examined periods. The thesis is based on the catalogue of the archaeological contexts, the description of method and structure is followed by the synthesis of facts about archaeological context of finds. The main part of the thesis is a register of tool classes, examining their chronology, morphology and selectively also the occurrence in other sources. The conclusion brings together the facts and delineates the role of copper tools and model tools in the Ancient Egyptian society of the examined periods.
