

**Mgr. Ivana Příbramská: Informační systémy ve vysokém školství s důrazem na identifikaci uživatelů, informačních potřeb a jejich uspokojování (dizertační práce)**

**Abstract**

Focus of this thesis is on users in tertiary education and on the extent, to which their information needs are met by information systems and resources provided by both higher education institutions and other organizations. Second chapter sets up a theoretical framework, summarizing research in the field of the information seeking and information seeking behavior, models of information seeking, information needs and their satisfaction. Third chapter describes higher education area and its role in information provision to the users (coming from both within and outside the area); all users within this area are classified and their information needs and sources for satisfaction of these needs are listed. Fourth chapter is concerned with information systems in higher education in Czech Republic including classifications used within this field, national systems collecting data from higher education institutions and short description of three local information systems. Final chapter describes two examples of implementation process and further development of two particular information systems used at the Charles University in Prague and on the Faculty of Arts.
