

Abstract

Title of project:

Temperament Of Czech And German Flat Water Canoeist.

Aims:

The aim of this thesis is to identify character traits (temperament) in Czech and German kayakers.

Methods of work:

To determine the results of quantitative research was used, in the form of a standardized questionnaire Eyseneckova temperament characteristics, which we translate German probands separately. The evaluation was performed by adding three (score N, E, L) of the five dimensions and the results brought into the graph, where the quadrants are marked with the temperament traits.

Results:

The most common type of German temperament is sanguine competitors, extrovert with low neuroticism score, so emotionally stable. The Czech competitors no single prevailing temperament type.

Keywords:

Flat water canoeing, sports performance, charakter skills, temperament
