

## **Abstract**

The aim of this work is the analysis, description and evaluation of the Secondary Education Programme in the Field of Library and Information Systems and Services of the Secondary Vocational School of Commerce, Services and Crafts and Language School with the Right of State Exams in Tábor. In the introduction there is a list of secondary schools in the Czech Republic which offer this field. In the principal part there is briefly introduced the Secondary Vocational School of Commerce, Services and Crafts and Language School with the Right of State Exams in Tábor, then there is analyzed in detail the actual study of Library and Information Systems and Services, which also includes comparison of curriculum of the subjects with discussed subject matters in reality. This bachelor thesis focuses on the teaching of the field in 2005-2009. There is briefly outlined, how it is about the realization of the transition to a new educational framework 72-41-M/01 Information Services. As part of the thesis, a survey of follow-up study was conducted, respectively the employment of graduates by survey methods. The survey results were used to the overall evaluation of the programme, which is presented in the conclusion.

Apart from an overview of secondary schools offering library branches, the benefit of this work is especially the very description and analysis of that program. Any source of information of this type has not been processed yet.
