

## Conclusion

At the conclusion of this work I wanted to say that I'm glad I chose it, and it could be processed with the help of professional supervisors, because I wanted to have my thesis objective.

The main and most important objective of this thesis was to find basic information on humanitarian and educational projects in Kenya and life in the ghetto. In the first research, where I had set 4 goals and 4 hypotheses I conclude that all humanitarian needs free development and educational projects. Since they are not directly identify or determine whether a hospital is more important than school.

Therefore, we always have to start to figure out which of the planned projects is needed first. Another important point I consider the views of Kenyans is the fact that people in Kenya to stop relying on yourself themselves, they might stop working or trying to get a job for surviving their family. Therefore, I also think that every project should be build with Kenyans people like a co-worker or they should help with building projects in their area

I would also like to say, as not only in Kenya but all over the world is important prevention of health and social education, because I think that prevention is much cheaper and easier, than medical therapy of HIV for example.

In other research, which I also did an interviews with people, who are living in the ghetto and they came to U.S from Africa, Mexico or Haiti. One of them is native Kenyan, who is living in Czech Republic. Except person who live in Czech Rep. everyone else came to U.S. because they wanted to get a good job, better education, but they didnt have a good information or good education for living here. Thats the main problém of people who dont have enough information.

I wanted to also compare it, if there is any difference between the U.S. and the ghetto slums in Kenya, even though it was neither a target nor the purpose of this work. As I was among the interviewees found almost no difference, because all of them came to the big city for the purpose of obtaining a good job and better education.

Since I have personally had the opportunity to travel to Kenya, I used this stay in the U.S. and trying to find alternative solutions for research, I think that this decision was correct because I know them personally and I have personally met with their life in ghetto.

And the main way to start a new social life outside the ghetto is that we should find a solution themselves and help themselves as far as we can.

I think that all the goals that I have established at the beginning of the work, to fill up

over my expectations. In the introduction I wrote that I wanted to find a solution to help people out of their difficult life situation, I'm not entirely sure If I found the right solution. The only one who can confirm it,are people who lived in ghetto and who found wau out.
