

Abstract

Title: Impacts of the Introduction of Euro for the economy

Objectives: Compare impacts of introduction of Euro to economy of accepting country and estimate benefits of the common currency

Methods: Collecting macroeconomic indexes of EU countries, comparison these indexes between eurozone countries and other EU countries.

Results: After Euro introduction macroeconomic indexes of member countries have gone approximate. This result can be understand as positive factor in the lifecycle of economical integration, which should aim to economical union. On the other hand countries of eurozone shows higher oscillations of economical indexes than other EU countries. This factor can cause problems in a crisis.

Keywords: European union, Euro, Economic and Monetary Union of the European Union, economy
