Legal regulation of protection against air pollution from mobile sources

The goal of this thesis is to map tools used for legal regulations of mobile pollution sources. Thesis focuses on problematic regulation of motor vehicles' pollution in Czech Republic, however it also outlines basic legal adjustments related to other mobile pollution sources.

Thesis starts with basic introduction to this problematic followed by overview of international legal regulations and main conceptional tools used for legal regulations in European Union. In the chapter dedicated to the principles of european law in terms of regulation of mobile sources' pollution thesis tries to research how are those regulations already being applied to specific legal norms.

One chapter is dedicated to protection of rights for convenient environment and their prosecution. In the next part of the thesis the normative regulations within emission standarts, approval of types, requirements for fuel quality and control of emissions of motor vehicles are examined. In the last chapter the new legal adjustment of mobile sources' pollution named in the law of enviroment protection is briefly explained in context with increasing number of problems with regulation of road traffic in cities.

Key words: air pollution from mobile sources, fossil fuels, legal regulation of air pollucions
