

ABSTRACT:

The aim of the bachelor work was to learn about suitability of including and utilizing of textile technologies into the children and youth free time activity. To evaluate experiences and interests of school- and student-girls attending three of the bees in Children and Youth House in Prague-Stodůlky. I used questionnaire investigation. The hypothesis that girls would be interested in fashionable dress accessories crocheting has not been confirmed. The girls preferred batik and embroidery. Further an activity program for textile materials processing has been developed for the bees mentioned. The program has been implemented in the period of September 2011 till February 2012. Were included in various textile techniques. To investigate girls' craftsmanship and knowledge I use direct observation method. The activity program has been proved well. To investigate about usage of textile techniques situation in other free time dedicated facilities a questionnaire investigation has been used. Respondents were students of 3rd year of pedagogue course combined study in UK PedF, Praha. Among frequently posted techniques belong batik, cloth painting and needle work.
