

The bachelor thesis called “ Environmental friendly forms of housing in the Czech Republic ” focuses on the issues of environmentally friendly houses. The thesis is divided into two parts. The first part deals with the environmentally friendly buildings in general. It explains the basic terms and describes the situation in the Czech Republic as well as contains the assessment of each of the Czech regions and their approach to the environment.

The second part of the thesis is about the ecological build-up in Prague and the attitude of residents of the environmentally friendly districts of Horní Počernice and Dolní Měcholupy.
