artificial lung ventilation

This bachelor thesis deals with the topic of communication between the general nurse and the patient. It consists of two parts – theoretical and empirical.

The theoretical part explains communication in general, nonverbal communication in the process of medical care. Specifics of nonverbal communication with the patient on artificial lung ventilation are part and parcel of the thesis.

The empirical part is based on a survey presented by a questionnaire assigned to selected departments in Faculty hospital Motol in Prague. The subject of the research lies in knowledge as well as experience of general nurses on the basis of nonverbal communication with the patient, possibilities of nonverbal communication with patients on artificial lung ventilation.
