Department of special education

SUPERVISOR:

doc. PaedDr. Vanda Hájková, Ph.D.

ABSTRACT:

In my bachelor's thesis I focus on the issue of cerebral palsy and deviations of psychomotoric and speech development associated with this condition. First, I'll describe in theory psychomotoric and speech development of intact children aged from newborns to school age. In the second part I'll focus on psychomotoric deviations and particular forms of speech disorders compared with the children's peer group. In my practical part I focus on assessing the influence of the condition on the acceptance of the children to a school facility, whether the symptomatic speech disorders associated with cerebral palsy affect learning abilities, and finding out parent's opinions on their children's employment and future career.

KEYWORDS:

Cerebral palsy, psychomotoric development, speech development
