In my thesis I made a suggestion of the educational project of the subject "Drugs from different points of view". The project is made for students in secondary schools and contains several theoretical tasks in which students get knowledge about legal and illegal drugs. Students work in groups and then present their project and information to their classmates in a multimedia presentation.

This project was launched in the fifth class at Jan Neruda Grammar School in Prague (the six-grade-school) in 2009. During implementation there was confirmed that education based on project learning is an appropriate form especially for topics having close connection with our everyday life problems, where the traditional teaching methods are not acceptable. The project also proved to be a suitable format for science subjects connection and integration. Working in groups – cooperative education – has been proved suitable too.
