

## ***Abstract:***

**Topic:** Presence and efficiency of three-points shooting attempts reliant on perimeter prolongation (in Czech Women basketball League)

**Aim:** The aim of my bachelor's thesis to find out frequency and success rate of 3-points shots in two following seasons in Woman Basketball league (ŽBL) during basic parts of these two seasons. In the first season was perimeter prolongation introduced. On the basis of statistical survey follows comparison of these results.

Primary aim is creating statistical analysis, which should show the influence of perimeter prolongation to 3-points shooting among teams in Woman Basketball league (ŽBL).

**Methods:** Taking into consideration quantitative survey, my dissertation work was based on methods of secondary information collecting, that implies (which means) secondary statistical analysis and observation with taking records down.

**Results:** Reduce the presence of three-point shooting on 293 attempts and reduce efficiency by 3%

**Key words:** Basketball, Woman Basketball League, Three-Point Field Goal Area, shooting, three-point shooting
