Keywords: lieve, heart, ischemic heart disease, myocardial infarction, risk factors

The bachelor thesis deals with patient's life style before suffering myocardial infarction within a few regions of the Czech Republic. It points out risk factors which can cause myocardial infarction. It emphasizes the difference between life style of women and men.

The focus is created by quantitative research targeted on risk factors of cardio-vascular disease. The researched sample is created by patients who are hospitalized for acute myocardial infarction solved by percutaneous coronary intervention in regions Hradec Králové, Pardubice, Ústí nad Orlicí, Brno and Rychnov nad Kněžnou.
