

Abstract

Title:

New trends in European Football – analysis of elaborate attack

Objectives:

The main objective of this thesis is to explore current trends in modern football. Based on the monitoring of leading European players and football teams, in our case its Switzerland and Spain, we would like to analyze offensive system of elaborate attack in chosen matches. Based on the data to evaluate the success of elaborate attack, as it stands in comparison with other offensive systems, as it is used in the individual matches, which puts demands on team and individual players requirements. Then, on the base of following models, evaluate individual situations that lead to a successful overcome of defensive players, and use those data to draw conclusions in the training process for training practice.

Methods:

This work uses the method of indirect observation in particular matches, that I had available, thanks to the video. The elaborate attack will be monitored in several categories and will be carefully analyzed in qualitative and quantitative terms. Based on these analyzes are developed exercises that can be used in the training process.

Results:

The results show, how important elaborate attack in football today really is, and how successful could it be. Also indicate, what are the most common, and most used models of elaborate attack by teams of Spain and Switzerland, in overcoming defense. Finally, these results will be used for training practice, using the developed models from this work, that can be successfully applied to other performance categories.

Keywords:

Football, elaborate attack, model scenario, qualitative analysis, quantitative analysis, Switzerland, Spain, The 2011 European championship at the under 21 in Denmark
