Abstract

The main aim of this master thesis is to assess the social environment of Jesenice u Prahy, in the context of social dimension of sustainable development. With the outcomes of the case study, a conclusion will be drawn, whether a suburban municipality model can be sustainable or not (again from the social point of view only). The master thesis also tries to identify areas, which seem to be crucial for the social dimension of sustainable development. Another aim of this thesis is to identify the means by which a suburban municipality can move towards sustainable development. The research is aimed predominantly at the inner factors of municipal development, especially in the form of municipal government or the role of local communities on the way to sustainable development in its social dimension.
