The aim of this dissertation is to summarize the current ecological situation in the Czechia. A very important aspect of this alternative agriculture is its regional differentiation. Czechia has a lot of organic farms, the main aim of this thesis is to map their location and determine the location is correct or not.

NUTS 4 units will be used in mapping the distribution of ecological farms as they are the suitable units for making comparisons. The source of data on which this research is based is the Ministry of Agriculture and Control organization KEZ, o.p.s. The results of this research are displayed in the form of tables and pictures. Cartograms and cart-diagrams are used to display the geographical distribution of the organic subjects. The commentaries on the cartograms and cart-diagrams are the key part of this research. This dissertation also briefly looks comparison Czechia with other member states of the EU member states in organic farming and own research which aims to offer organic products in stores.
