

In my school leaving work I will deal with problems of family life with mental handicaped child in early and preeschool age.

The main aim of the work will be to describe how patents pass their child's handicap, which problems they have to solve and witch kinds of care they can take.

In the teoretical part of the work I would like to reach these aims with the help of speciál literature which devote this topič. Important sourse of information in practical part will be dialogs with childred's parents. In the finál part I will compare, value and comment these information.
