

ABSTRACT (English version)

Title:

Characteristic of the Czech kiteboarding population

Objectives:

The main goal of this thesis is research of available sources concerning to the topic and analysis and detailed characteristic of the Czech kiteboarding population.

Methods:

Research of this thesis was based on questionnaires which were collected between kiteboarders and following analysis of collected information. Questionnaire has 20 topics, which were given to respondents who already have experiences with kiteboarding. The questions in the research were made to give one answer or select one of the options. It was collected 200 questionnaires at total. Main methods used in this work are: analysis, synthesis, induction.

Results:

On the base of research were confirmed given hypothesis. Which are: 1. We assume that at least half of the kiteboarding population think that kiteboarding is dangerous. 2. More than half of the respondents started with kiteboarding on their own. In diploma thesis which is about relatively young and developing sport were collected and analyzed important figures on sample of kiteboarding population.

Keywords:

Kiteboarding, snowkiting, powerkiting, landkiting.
