

Abstract

Diploma work is targeted on analysis and description of information sources for software application and management information systems in printing industry. At first information needs and information overloading are shortly defined. Next are described concepts of printing industry, software for printing industry and relatives concepts of management information systems and workflow systems.

In next chapter keywords for information retrieval was arranged in hierarchical tree structures. Core specialised journals and usefull information sources were found within information retrieval. In work are involved both deep web sources and surface web information sources. Found information object are described and cited by ISO 690. At the end of work are given categorised bibliographic lists and simple web page project for specialised information portal.
