The subject of this thesis is to design and implement an information system usable in the area of science conferences. The work introduces the reader into issue that had to be solved during the development. It will also familiarise the reader with application's structure and give the instructions for use. The program allows the user to gather and manipulate information about science conferences. The system also allows managing assignment of monetary resources and their connections with individual conferences. Therefore, it offers creation of monetary resources overviews.
