

Abstract

The diploma thesis deals with the topic of insurance system in the Czech Republic and its transformations since 2009. Analysis of social and economic effect that was brought by alternation in legislation in code 187 / 2006 has become the objective of this work. The reasons for issuing the legislation alternation were struggles to change negative trends in sick insurance, to avoid unjustified costs and to ensure financial stability of the system. The introduction mentions theoretical concepts concerning the topic of the work and methods and procedures used while composing this diploma thesis. The area of the sick insurance is characterized by basic principles, terms and conditions in claim system and brief history of social protection institute in Czech Republic is also covered. The empiric part describes individual changes as a part of public finance reform. Specific impact on selected actors was subsequently analyzed. Three possible sceneries of resolving sick insurance issue are designed in the final part of the work.
