### III. Průběh obhajoby

Olga Ioannidou presented the results of her diploma thesis. Then she answered the questions of the reviewer. Questions posed during discussion concerned safety requirements for manipulation with viruses and possibilities of treatment of infections caused by coronaviruses. She was very well prepared for the questions of the reviewer, but her answers to unexpected questions of other members of the committee were less convincing. Nonetheless, in comparison with some other students her presentation was still excellent.
