

## **Japan-Mexico type of demographic revolution – evaluation of development in Japan and Mexico**

### **Abstract**

The aim of this work is to evaluate the progress of the demographic revolution in Japan and Mexico using the definition of the Japan-Mexico type demographic revolution, which is defined for the characterization of the process of the demographic revolution in developing countries. The main question of this thesis is whether we can characterize the process of the demographic revolution by the population development of this two countries, namely Japan on one side and Mexico on the other side. Firstly, the work is focused on the definition of the beginning and end of the demographic revolution in developing countries and analysis of its process. In the following part, there is an explanation of the demographic revolution in Japan and Mexico based on the analysis of mortality and fertility and changes in the age structure. In accordance with the given aim the analysis is not performed in the same time period, but in particular stages of the demographic revolution. In conclusion common and different features of the process of the demographic revolution in Japan and Mexico are summarized and so the reasons for designation the process of demographic revolution in developing countries as the "Japan-Mexico" is explained.

**Klíčová slova:** demographic revolution, japan-mexico type of demographic revolution, course of demographic revolution in developing countries, Japan, Mexico
