

Local government's approach to D3 highway construction: case study of city of Tábor

Abstract

This thesis analyzes attitudes by political representatives from local administration of two biggest cities in southern Bohemia towards D3 highway. The main part of analysis focuses on district city of Tábor and partially on regional metropolis of České Budějovice. D3 Highway is supposed to become not only the important intrastate corridor but also the new connection between Czechia and Austria. Projected impacts of highway are compared with literature while the thesis concentrates on perception assessment of D3 highway by political representatives from selected city of Tábor. The main evaluation criterion is the perception of D3 highway as one of the basic requirement for general development of the region. Main research tool of analysis is half-structured interview with representatives of selected cities.

Key words: D3 highway, Tábor, České Budějovice, perception, development, interview
